

Advanced demountable transformer with sensor and software (with low power supply)

EQ870.04

Function

For the study of the following topics:

- electromagnetism: electric load in magnetic field, Oersted's experiment, Faraday and Lenz's law, static and dynamic magnetic fields, Foucault current, Ampère's law, interaction between two conductors, solenoid, electromagnetic induction;
 - electrodynamics AC: alternate currents and voltages, electromagnetic phenomenon, increaser and reducer transformers, energy conservation;
- Experiments with data acquisition.

Knowledge areas

Physics - Math & Science Fundamentals

Level

Graduation - Technical education

Av. Victor Barreto, 592 - CEP 92010-000 - Canoas - RS - Brasil
